

Fleurettes prefer bright, indirect sunlight. Avoid direct afternoon light which can be too intense for a Fleurette and burn the flowers.

Fleurettes perform best at home and office temperatures. You will see it thrive at 15 to 20°C. Avoid placing Fleurettes on appliances that give off heat, such as a radio or television, or near heater vents or windy locations. This can tend to dry out the plant quicker.

Product Information

Fleurette Mums are a cross between a domestic and a wild Asiatic Chrysanthemum. The result is a lush, compact plant covered with beautiful flowers. Fleurettes are quite petit compared to standard Mums, but like all Chrysanthemums, this is a very easy plant to care for with exceptionally long-lasting blooms.

Perfect for all kinds of containers. Makes a wonderful centerpiece. May be displayed outdoors in warmer weather. A lovely, easy-care gift plant.

Care Tips

Avoid letting the soil dry out in a Fleurette. They require watering every day, to every other day, depending on their temperature and light level. Water the pot from above until water runs out the bottom of the pot. Do not allow your mum to sit in water, as this will harm the plant.
